Work Experience

Software Engineer, Logicea, Remote

09/2024 to Present

- Collaborated closely with designers, cross-functional engineering teams, and accounting staff to modernize legacy accounting platforms and create single sign-on hubs so users can navigate all our products in one place.
- Rebuilt a legacy Laravel multi-tenant platform using **Next.js, React, TypeScript, MySQL, CSS, Git** in an agile workflow, significantly improving page load speed and code maintainability.
- Built a single account hub using **NextAuth, AWS Cognito, Stripe, REST APIs** so users can log in once, manage their subscriptions, and purchase products across all apps.
- Stabilized government tax server integrations (AADE/myDATA) by developing a **TypeScript, Node.js** server caching layer, cutting external network calls by 85% and preventing rate-limit failures.

Software Engineer (Research Fellow) ICS-FORTH, Heraklion, Greece

10/2024 to Present

- Worked with researchers and engineers across FORTH and partner universities to build full-stack web applications and conduct research for EU-funded projects (GreenInCities).
- Built the GreenInCities monitoring platform for Profitis Ilias Park in Athens using **Next.js, React, HTML, CSS, TypeScript** and **Socket.IO** to deliver real-time sensor streams and interactive widgets.
- Integrated a **NestJS and MongoDB** backend services to store and stream continuous context data from NGSI-LD brokers directly into custom multi-widget user dashboards.
- Integrated **Keycloak OIDC** to secure **REST API** endpoints with **JWT** verification, managing session persistence via refresh tokens for multi-tenant partner logins.

Frontend Developer Intern, Logicea, Hybrid

06/2024 to 09/2024

- Built a demo web application using **React, Next.js, TypeScript** and **Git** collaborating within an agile team of 7 intern developers.
- Built responsive UI components and frontend features using **HTML, CSS** following provided Figma design specs.

- Went through daily **Git code review** sessions with a senior developer to review PRs, improve code quality and adapt to company engineering standards.

Education

- **M.Sc** in Computer science from UOC Status - Expected 2027
FORTH-ICS Graduate Research Scholarship Recipient
- **B.Sc** in Computer science from UOC Status Graduated
FORTH-ICS Undergraduate Research Scholarship Recipient

Projects

UoC-Assistant — Student Academic Platform (Personal Project)

- Used **React, TypeScript, CSS, HTML, FastAPI & Python** to build a full-stack student planner that generates custom semester plans based on work hours and goals, using Python checks to enforce prerequisites and prevent exam overlaps.
- Implemented a retrieval-augmented QA chatbot using **Gemini API & RAG** over academic PDFs, retrieving verified answers with exact source citations.

Teaching & Professional Service

Teaching Assistant, University of Crete (UOC)

09/2025 to 05/2026

- Databases (HY-360) Led 2 theoretical lab sessions, managed course website using **HTML, CSS and JavaScript**, and evaluated student projects, midterms, and final exams.
- Algorithms & Complexity (HY-380) Maintained course web platform **using HTML, CSS and JavaScript** and evaluated weekly assignment submissions and final exams.

Session Chair & Host (Contract), HCI International Conference (Montreal)

07/2026

- Managed technical hosting for 13 virtual sessions and stepped in as Session Chair for a live proceedings session, supporting 100+ international speakers and attendees across the 6-day conference.

Publication

- EDBT 2026 Publication Co-authored research and built a **Python** pipeline using SPARQL, RDFlib, and **Gemini/Groq APIs** to extract and score explainable subgraphs from Knowledge Graphs. [[Paper](#)]
- Springer Publication Authored Bachelor's thesis research on HIFUN, building a high-level functional query API with hybrid **SQL-NoSQL** database integration. [[Springer Link](#)]
